Human ProIGF-I EB (104-123) antiserum (Rabbit)

Description

Human ProIGF-I EB (104-123) antiserum was prepared by immunising rabbits with a 21 amino acid peptide derived from human ProIGF-I EB linked to diphtheria toxoid. The peptide is located within the E domain of the 195 amino acid ProIGF-I EB, derived from alternative splicing of the human *igf-1* gene. The antiserum recognises ProIGF-I EB but not ProIGF-I EA, ProIGF-I EC, mature IGF-I or IGF-II. Peptide sequence analysis suggest it may recognise ProIGF-I EB related proteins in a range of non-human primates but not many other species due to alternative splicing of the *igf-1* gene. There is significant homology to similar regions of ProIGF-I variants in bovine, porcine and canine species to suggest it may be effective.

Immunogen:

Derived from UniProtKB/Swiss-Prot sequence ID P05019 isoform 1 also known as IGF-IB which is recognised as the canonical sequence. The peptide sequence is amino-acids 151-170, derived from ProIGF-I EB, conjugated to diphtheria toxoid.

Source:

Rabbit antiserum

Specificity:

Recognises Human ProIGF-I EB (isoform 1, P05019).
No cross-reactivity against ProIGF-I EA (isoform 2, P05019-2);
ProIGF-I EC (Q13429) mature IGF-I or IGF-II.

Appearance:

Lyophilized powder

Storage/Stability:

At least 2 years at 2 - 4°C (lyophilized).
After reconstitution store at -20°C or -80°C
Avoid freeze-thaw cycles

Reconstitution:

Dissolve the vial contents in 100 µl sterile water and then dilute in a buffer suitable for the application.

Application and Titre:

Each application and titre should be determined in house. As a guideline the antiserum can be used at a dilution of 1:1000 for Western immunoblotting.
