Human IGF type 1 receptor CT-1 monoclonal antibody (C-terminal)

Description

Human IGF type 1 receptor antibody CT-1 (IGFR 1-2) is a mouse monoclonal antibody (IgG1) that binds to the C-terminal intracellular domain of the human and rat IGF type 1 receptor. The antibody was prepared using the C-terminal hexadecapeptide of the human IGF type 1 receptor β -subunit (YRKNERALPLQSSTC). The antibody reacts with human and rat IGF type 1 receptors but not insulin receptors.

References:	Soos MA <i>et al</i> (1993) Biochemical Journal 290 , 419-426
Immunogen:	The hexadecapeptide YRKNERALPLQSSTC conjugated to keyhole limpet haemocyanin
Source:	Produced in hybridoma cells derived from the NS-1 myeloma cell line. Purified from conditioned medium by Protein A affinity chromatography
Specificity:	Cross-reacts with the human and rat IGF type 1 receptor but not the human or rat insulin receptor
Appearance:	Lyophilized white powder
Storage/Stability:	At least 2 years at 2 - 4°C (lyophilized). After reconstitution store at -20°C or -80°C Avoid freeze-thaw cycles
Reconstitution:	Dissolve in 100 μ l phosphate buffered saline pH 7.4
Application and Titre:	Western immunoblotting (1:5,000); Immunoprecipitation (1:5,000); Enzyme immunoassay (1:5,000)
